Nicholas Luparello, Nautical Air Inc.

Custom Warehousing & Fulfillment Solutions for Business

Bringing people, processes & technology together for high-volume, time-sensitive fulfillment and distribution of customized samples, parts and products for businesses and consumers.

Order Management Functionality

- Capture orders electronically with shopping cart functionality
- Pre-populate order screens based on user login
- Review order completely before it’s submitted
- Send emails acknowledging order receipt and order shipment
- Prioritize shipments using our “rush” button
- Capture lead sources
- Control product allocations by amount or budgets
- Control user access privileges
- View inventory levels in real time to prevent orders on out-of-stock items
- Check order status on-line

Warehouse Management Functionality

Our Warehouse Management System (WMS) allows us to know where your stock is and how much inventory you are able to supply. You can then manage your inventory and supply levels 24/7. You can examine our historical usage reports, and warehouse operations can automate the organization and prioritizations of tasks.

Robust Reporting

Our system offers a wide range of standard reports, from inventory on-hand to lead sources. Custom reports can also be built. You can download reports over the web from your desk. Or we can program the system to deliver to you via email based on a set schedule. Reports contain real-time data and are available in Excel, PDF, and rich text formats.

Pick, Pack, Ship, Repeat

Each customer’s dedicated expert team of client service reps pick, pack and ship your order. An order is received through the Order Management System (OMS) and generates a pick slip to fulfill a wide range of orders. You can be sure that your product will arrive on-time and be completely trackable.
